

INFORMATION SHEET

Exciting new performance product for your next event!

Imagine bionic performers with dynamic springs on their feet capable of jumping high in the air as if on a trampoline. Super beings able to jump, flip and run with the greatest of ease. Now add to that performer based pyrotechnics that mimic the movements of the performers. When the performers jump high in the air dramatic pyro shoots out from the bottom of the stilts simulating jet propulsion. On every jump comes more and bigger effects! Bright burning flares ignite on the arms and legs of the bouncy stilt performers enabling them to scribe vivid patterns in the air with their flips and tumbling routines. Pyrotechnic wheels spin from their helmets and backpacks making these performers into a human fireworks show but due to the technology and portability this show can take place indoors or out and is capable of walking off stage afterwards with no gear to strike.

PYRO BOUNCY STILT FAQ

Q: Can this act be performed indoors?

A: Yes, it is often performed indoors just as long as there is an adequate stage size.

Q: Will the pyro damage my stage or set?

A: No, with the new technology of indoor pyrotechnics there is no danger of damaging or leaving any residue on stage. As long as the stage and set meet minimum fire retardant specifications there is no possibility of fire.

Q: This act looks dangerous?

A: We use high level acrobatic and pyro trained performers only. All our performers have a high level of experience doing this act and it has become second nature to them. We also employ a highly skilled technical crew who ensure that everything is in place for a flawless performance.

Q: Will it be smokey or dangerous for the audience.

A: No, this new pyro creates almost no smoke and is extremely safe.

Technical Information

Stage:

The stage must be a minimum of 25' square (bigger is better) with an extremely durable non-slip surface. There can be no water on the stage. This act requires at least 16' of over-head clearance.

Venue:

The venue must be 'pyro friendly' and open to a pyro based performance. We take care of all the licensing, insurance and permit requirements. Good ventilation is a must.

Pyro:

We choose our pyro effects based on the size of the budget and venue. For large outdoor events the sky is literally the limit but we have a smaller class of effects that we can fit in any sized venue. We have safely executed hundreds of pyrotechnic performances over our 10 years in the business. References and resume available upon request.
